

Abstract

An automobile clothes hanger bracket providing a better retaining effect comprise a hanger part with two extended rods and two mounting units. Each of the mounting units further includes a rod holder, an extended
5 bars and a control member. The rod holders respectively hold the head piece rods of the head piece of a car seat. An axial hole passing through the members of each mounting unit can retain an extended rod of the hanger part. Each of the head piece rods is provided with a locking mechanism consisting of a spring and a control knob, so that the hanger part can be
10 removed from the mounting units easily.
